Who do we work for?

- Distribution System Operators (DSOs)
- LV and MV contractors
- Power infrastructure designers
- Specialist electrical distributors
- Industrial sector

Why ALPAR?

- Manufacturing compliant with current PN-EN and IEC standards
- High mechanical and environmental resistance of products
- Complete systems – from custom design to switchgear solutions
- Continuous availability and technical support
- Solutions engineered with professionals in mind

Our offer

LV overhead line components

- LV conductor and service clamps
- Bolts, hooks and anchoring hardware
- Brackets and lighting accessories
- Connectors and line fittings
- LV surge protection
- Support and mounting structures
- Electrical equipment and accessories
- Installation tools

MV switching equipment and drive systems

- MV overhead disconnectors and load break switches
- 100 A load-break switches
- Manual and motor-operated drives

MV line equipment and structures

- Line crossarms
- Steel support structures
- Overhead line hardware

Lightning protection system components

- Roof and façade mounting holders
- Inspection and cross connectors
- Earthing systems
- Earth test boxes and installation hardware

We design and deliver solutions that have a real impact on:

- Safety of maintenance crews
- Network durability
- Power supply reliability
- Efficient installation and maintenance

Proven reliability and technical compliance

Market experience

For years, we have maintained a strong presence in the power infrastructure sector, providing reliable solutions for LV and MV networks.

Cooperation with DSOs

Our solutions are tailored to meet the specific technical standards of Distribution System Operators and the unique conditions of their power grids.

Technical compliance and requirements

Our solutions are developed in accordance with current PN-EN and IEC standards, ensuring operational safety and full regulatory compliance

Manufacturing and quality control

Our design and manufacturing processes are focused on durability, quality, and the consistency of performance parameters
